

MAS 81.K

✓ Volovod E **NOVO**

ZA SVE USLOVE PROIZVODNJE

- **FLEKSIBILAN I PRILAGODLJIV**
Odgovara svim uslovima
- **RANO CVETANJE I KRATKA VEGETACIJA**
Hibrid prilagodjen svim datumima setve
- **NISKA BILJKA**
Stabilna biljka koja ne poleže

Identitet proizvoda

Cvetanje	Early
Dužina vegetacije	early
Ulje tip	Linoleic

Karakteristike

Visina biljke	Short
Oblik glave	Flat/Slightly convex
Položaj glave	Mid erected
Masa 1000 zrna	52 - 61 g
Sadržaj ulja	42 - 45 %
Sadržaj oleinskih kiselina	%

Karakteristike

Početni porast
Poleganje
Tolerancija suša
Volovod

Tolerancija na bolesti

Plamenjača	RM9
Phomopsis	9
Sclerotinia (glava)	8
Sclerotinia (stem)	7

Preporuke

	Optimalni uslovi	Ograničeni uslovi
Prilagodjavanje	4	4
Broj biljaka po hektaru	70-65 000	75 000

Mas 81.K is able to value a really large range of cultivation conditions thanks to its earliness and a quick filling. Ideal hybrid for farmers who are starting sunflower crop and who would like to limit production risks. Moreover it is particularly interesting in case of late sowings, minimum tillage (need to wait more time for soil heating). Do not hesitate to increase plant density in high potential fields. Be careful to check the optimal harvest stage: natural shelling arrive more quickly
